Review:

Rotational Systems:

$$F = -\frac{1}{2}\Phi^2 \frac{dR(x)}{dx}$$

or alternatively

$$F = \frac{1}{2} I^2 \frac{dL(x)}{dx}$$

Review:

Rotational Systems:

$$T = -\frac{1}{2}\Phi^2 \frac{dR(\theta)}{d\theta}$$

or alternatively

$$T = \frac{1}{2}I^2 \frac{dL(\theta)}{d\theta}$$

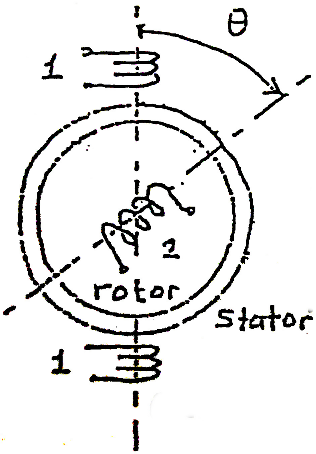
What is the torque in the following systems?

a) If Coil#1 is excited only,

b) If Coil#2 is excited only,

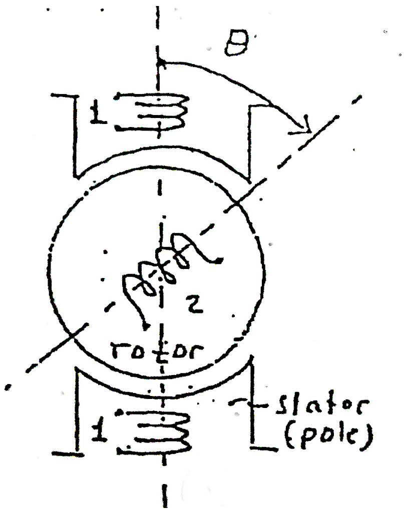
What is the torque?

Cylindrical Rotor, Cylindrical Stator



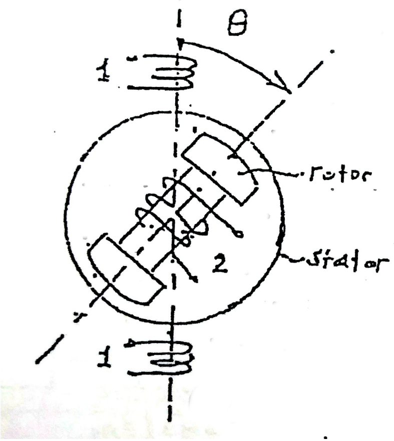
What is the torque?

Cylindrical Rotor, Salient Stator



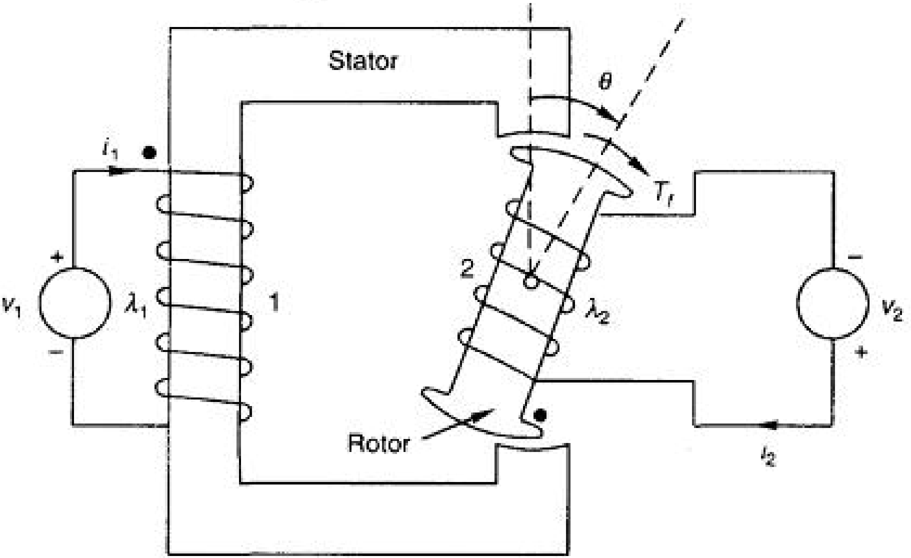
What is the torque?

Salient Rotor, Cylindrical Stator

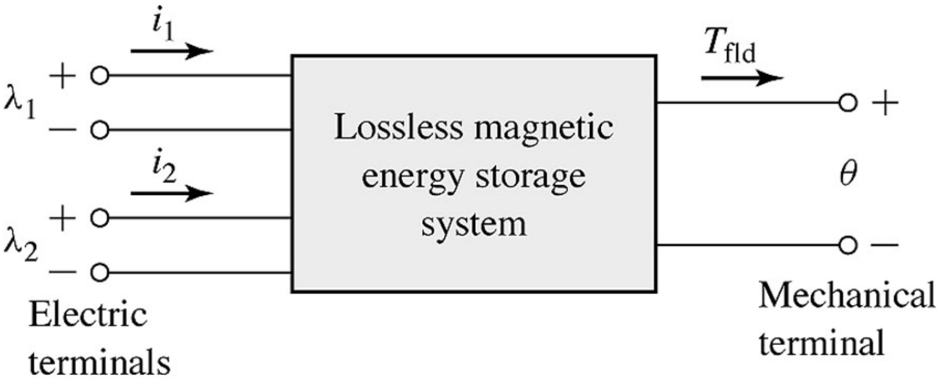


Multiply-Excited Systems

What happens if both of the coils are excited?

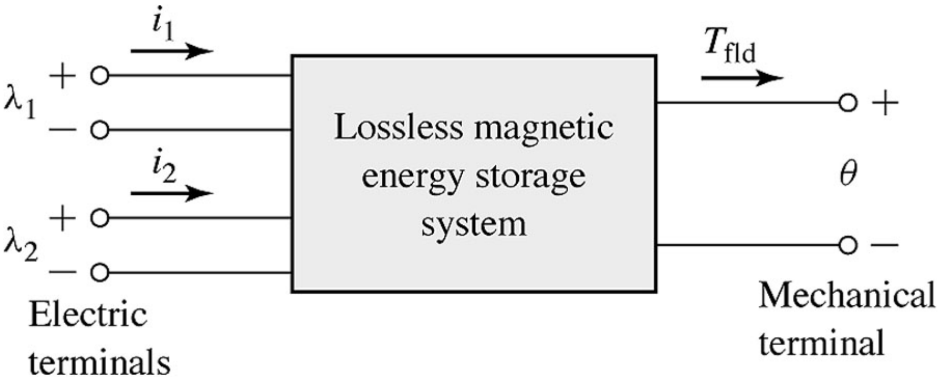


Multiply-Excited Systems



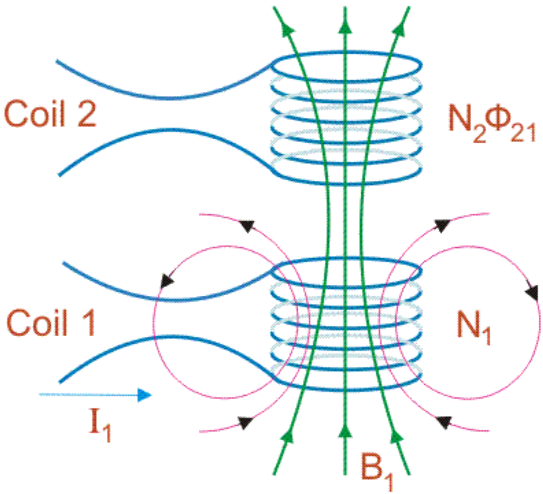
Electrical Energy = Magnetic Energy + Mechanical Energy

Multiply-Excited Systems



Electrical Energy = Magnetic Energy + Mechanical Energy

Mutual Inductance



Write down the voltage equation of Inductor 2.

What is the stored energy in coil1?

$$W_{mag1} = \frac{1}{2} i^2 L$$

What is the stored energy in coil1?

$$W_{mag1} = \frac{1}{2}i^2L \quad \rightarrow \text{Not Correct!}$$

What is the stored energy in coil1?

$$W_{mag1} = \frac{1}{2} i^2 L \quad \rightarrow \text{Not Correct!}$$

$$dW_{mag1} = i_1 d\lambda_1$$

What is the stored energy in coil1?

$$W_{mag1} = \frac{1}{2}i^2L \quad \rightarrow \text{Not Correct!}$$

$$dW_{mag1} = i_1 d\lambda_1$$

$$dW_{mag1} = i_1(L_{11}di_1 + L_{12}di_2)$$

Total stored energy (coil1+coil2)?

$$dW_{mag} = i_1 d\lambda_1 + i_2 d\lambda_2$$

Total stored energy (coil1+coil2)?

$$dW_{mag} = i_1 d\lambda_1 + i_2 d\lambda_2$$

Or it can be written as:

Total stored energy (coil1+coil2)?

$$dW_{mag} = i_1 d\lambda_1 + i_2 d\lambda_2$$

Or it can be written as:

$$W_{mag} = \int dW_{mag}$$

$$= \frac{1}{2} L_{11} i_1^2 + \frac{1}{2} L_{22} i_2^2 + M i_1 i_2$$

Stored Energy in Matrix Form

Stored Energy in Matrix Form

$$W_{mag} = \frac{1}{2}\begin{bmatrix} i_1 & i_2 \end{bmatrix}\begin{bmatrix} L_{11} & M \\ M & L_{22} \end{bmatrix}\begin{bmatrix} i_1 \\ i_2 \end{bmatrix}$$

Stored Energy in Matrix Form

$$W_{mag} = \frac{1}{2}\begin{bmatrix} i_1 & i_2 \end{bmatrix}\begin{bmatrix} L_{11} & M \\ M & L_{22} \end{bmatrix}\begin{bmatrix} i_1 \\ i_2 \end{bmatrix}$$

Generalized case

$$W_{mag} = \frac{1}{2}\mathbf{I}_t\mathbf{L}\mathbf{I}$$

An application of multiply excited systems: Contactless Surgery More information

Torque in Multiply Excited Sytems

still depends on the derivative of W_{mag}

Torque in Multiply Excited Sytems

still depends on the derivative of W_{mag}

$$T_{mech} = \frac{1}{2}\frac{dL_{11}}{d\theta}i_1^2 + \frac{1}{2}\frac{dL_{22}}{d\theta}i_2^2$$

$$+\frac{dM}{d\theta}i_1 i_2$$

Torque in Multiply Excited Sytems

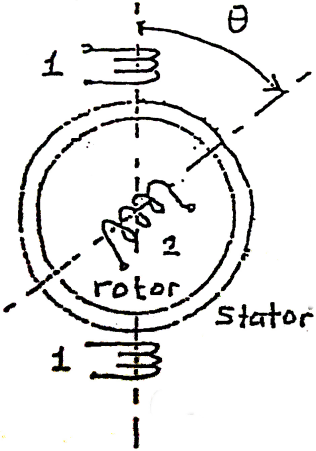
still depends on the derivative of W_{mag}

$$T_{mech} = \frac{1}{2}\frac{dL_{11}}{d\theta}i_1^2 + \frac{1}{2}\frac{dL_{22}}{d\theta}i_2^2$$

$$+\frac{dM}{d\theta}i_1 i_2$$

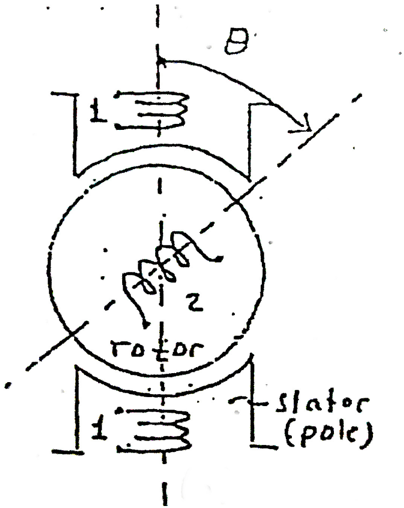
$$T_{mech} = \frac{1}{2}\mathbf{I}_t\frac{d\mathbf{L}}{d\theta}\mathbf{I}$$

Cylindrical Rotor, Cylindrical Stator



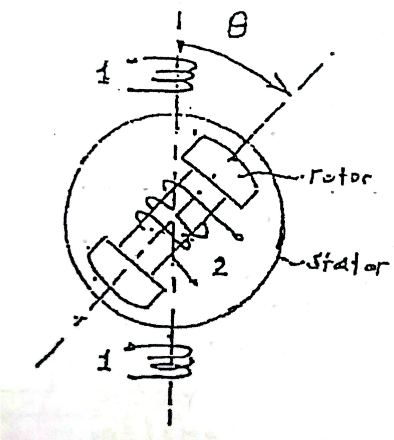
$$T = i_1 i_2 \frac{\partial M}{\partial \theta} : (L_{11}, L_{22} \text{ constant})$$

Cylindrical Rotor, Salient Stator



$$T = \frac{1}{2} i_2^2 \frac{\partial L_{22}}{\partial \theta} + i_1 i_2 \frac{\partial M}{\partial \theta} : (L_{11} \text{ constant})$$

Salient Rotor, Cylindrical Stator



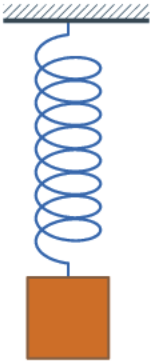
$$T = \frac{1}{2} i_1^2 \frac{\partial L_{11}}{\partial \theta} + i_1 i_2 \frac{\partial M}{\partial \theta} : (L_{22} \text{ constant})$$

Combination with Mechanical Systems:

Linear and Rotational Motion

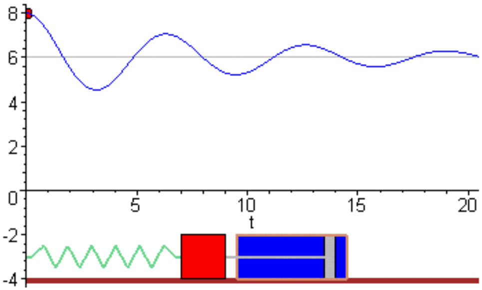
Linear	Rotational
X: (m)	(θ): (radians)
v: Velocity (m/s)	ω: Angular Velocity (θ/s)
F: Force (N)	T: Torque (Nm)
m: Mass (kg)	J: Inertia (kgm^2)
F=m dv/dt	T=J dω/dt

Dynamic Equations: Ideal Spring



$F = k(x - x_0)$: No energy dissipation (~Ideal Inductor)

Dynamic Equations: Damping



$$F = Bv = B\frac{dx}{dt}$$: Dissipates energy (~Resistance)

Overdamped, underdamped (similar to RLC circuits)

Dynamic Equations: Inertia

$$F = ma$$

or

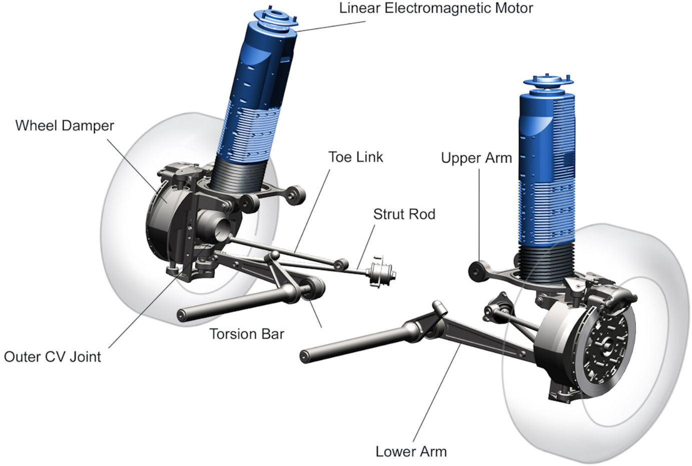
$$F = m\frac{dv}{dt} = m\frac{d^2x}{d^2t}$$

Dynamic Equations: Mechanical Side

$$f_{mech} = M\frac{d^2x}{d^2t} + B\frac{dx}{dt}$$

$$+k(x - x_0) + f_{external}$$

Bose's Active Suspension System



[Bose suspension system](), [Bose suspension will be mass produced]()

Bose Ride

[Bose ride](), [Truck Driver comments-1](), [Truck Driver comments-2]()

Summary

- Multiply excited systems still tries to minimize total stored magnetic energy
- Derivative of self inductances and mutual inductance can work together or oppose each other.
- Magnetic forces interact with the mechanical systems and generate a system response
